

Manual Testing Report

Project Name: ParaBank Online Registration System

Document url: <https://parabank.parasoft.com/parabank/index.htm>

Test Date: 03 May 2025

Tested By: Hironmoy Rahman

Test Type: Functional and UI Testing

1. Test Environment

Component	Details
Device	Laptop, Smartphone
Operating Systems	Windows 11 (Desktop), Android 13
Browsers Tested	Google Chrome (v123), Firefox
Screen Resolutions	1920x1080, 390x844 (Responsive)
Network Environment	Stable Broadband (10 Mbps)

Test Case Report:

TC ID	Test Scenario	Test Steps	Expected Result	Actual Result	Status	Severity
TC001	User Registration with valid data	1. Navigate to registration page. 2. Enter all required fields with valid data. 3. Click Register.	User is successfully registered and redirected to the login page	Successfully registered and redirected to the login page	Pass	High
TC002	User Registration with missing required fields	1. Navigate to registration page. 2. Leave required fields empty. 3. Click Register.	Appropriate error message is displayed for each missing field	Show appropriate error message for each missing field	Pass	Medium
TC003	User Registration with mismatched passwords	1. Enter different passwords in password and confirm password fields 2. Click Register	System should display password mismatch error	Show the error message of mismatching password and confirm password.	Pass	Medium
TC004	Login with valid credentials	1. Navigate to login page 2. Enter valid username and password 3. Click Login	User is successfully logged in and redirected to dashboard	Successfully logged in for entering valid username and password.	Pass	High
TC005	Login with invalid credentials	1. Enter incorrect username or password 2. Click Login	Error message for invalid login is displayed	Show error message for invalid login .	Pass	High
TC006	Forgot Login Info functionality	1. Click on 'Forgot Login Info?' 2. Enter SSN and other required details 3. Submit form	System sends recovery info or redirects appropriately	After entering SSN and other required details System sends recovery info.	Pass	Medium
TC007	SSN Masking on UI	1. View SSN displayed on UI	SSN is masked (e.g., XXX-XX-1234)	SSN is masked	Pass	Low
TC008	Open New Account after login	1. Login 2. Click on 'Open New Account'	System navigates to account creation page	Open account creation page after clicking open new account.	Pass	Medium
TC009	System response under normal load	1. Perform registration or login with multiple users 2. Measure response time	Response time is under 3 seconds	Response time is 2 second	Pass	High
TC010	Session timeout	1. Login and remain idle for a long time 2. Try to perform action	User is logged out automatically and redirected to login page	user logged out automatically and redirected to login page.	Pass	Medium

Bug Identified:

Bug ID	Description	Severity
Bug-001	Slight element overlap in footer on mobile view	Low

Recommendations

- **Enhance Password Security:**

Enforce stronger password policies during account registration (e.g., minimum 8 characters, use of special characters) to improve account security

- **Responsive Design Improvements:**

Optimize layout and text alignment on mobile devices. Currently, some sections (like the footer or sidebar menus) may overlap or become difficult to read on smaller screens.

- **Accessibility Enhancements:**

Add ARIA roles and labels for form elements and ensure that the site supports screen readers and keyboard navigation for users with disabilities.

- **Form Autofill Restrictions:**

Disable browser autofill on sensitive forms like login and fund transfers to enhance data security.

- **Notification Management:**

Include in-app notification settings for users to opt in/out of certain alerts (e.g., request status, event updates).

- **Cross-Browser Compatibility:**

Ensure UI and functionality work consistently across modern browsers like Chrome, Firefox, Edge, and Safari.

Overall Evaluation:

The ParaBank online banking system demonstrates functional stability across its primary modules. Core features such as login, account registration, fund transfers, and transaction history performed reliably during testing. However, minor issues related to input validation, user feedback, and accessibility were identified. Addressing these areas will help improve user experience and ensure the system is more secure and user-friendly before considering real-world deployment.
